II. DOMAINS OF RESEARCH

Syntax-Semantics Interface. Some major domains and topics of my research are linked to the interface between Syntax and Semantics:

- long-distance dependencies (dislocation, interrogation, relativisation and cleft sentences), through well-known phenomena such as reconstruction or resumption;
- study of quantification, indefinites, bound variable and *e*-type anaphora;
- comparison between several formal approaches to grammar, including generative grammar, categorial grammars, formal semantics and variable-free semantics.

Syntax/Semantics-Parsing Interface. I am also interested in more cognitive aspects related to those linguistic topics or phenomena, especially through formalisms in which Grammar and Parsing clearly interact, such as Dynamic Syntax.

Cross-linguistic approach and Microvariation. All these research topics are driven through a comparative approach to Celtic languages (Breton), Semitic languages (Arabic, Hebrew), Romance languages (French, Gallo) and Germanic languages (English).
